

The specialists in cylindrical grinding

# Mobile Data Portal

Tablet to **support** work on GST machines and other machine tools. For **setting up, retooling and repairing** of machines, by means of **documentation** and repair & maintenance **instructions**, in **text, picture and video**.

## Industry Tablet

for GST machines & machine tools

# Mobile workplace

- Suitable for **any hardware** with Windows operating system
- Possibility to manage several GST machines **with one tablet** as well as to equip and **integrate third-party** machines into the system
- Marking the machine components with a **QR code** facilitates an automatic reference to the documentation for **easy and quick access**
- **Easy & intuitive** user interface for storing **data, photos** and **videos**:
  - Retooling videos, e.g. change of a clamping system, set-up of measuring devices and steady rests
  - Tool change videos, e.g. grinding wheel and dressing wheel
  - Maintenance operations e.g. overview of daily, weekly and annual maintenance tasks and by whom these are to be performed
  - Complete machine documentation including plans & layouts
  - and much more!
- Indispensable for **modern maintenance / production** for **maximum productivity**

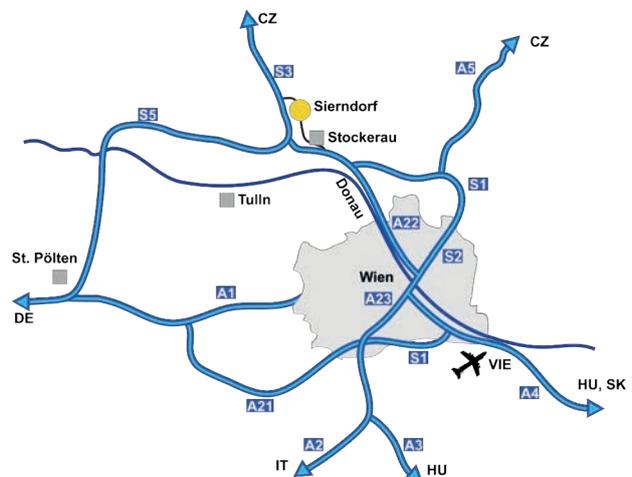

- **Industry standard** which is **highly resistant** to dropping, impacts, shocks, vibrations, dust, liquids & high temperature differences
- **Easy to handle lightweight** with powerful performance:
  - Large, bright display with high graphics performance
  - Large memory
  - Fast access times
  - Low energy consumption & long battery life
  - Wireless connection/communication via WLAN & Bluetooth as well as LAN interface for connection to the network or the machine
  - Various interfaces for a variety of connection options
  - Integrated camera for documenting operating procedures in photo and video format
  - Touch display and user assignable function keys
  - Including docking station and convenient carrying and fastening options
- Our tablet will be programmed and set up on **customer request** according to **specific applications** and **requirements**
